

NEW IMPROVED COVER

304 Stainless Steel is stronger with better corrosion protection

Quick release handle for easy operation

✓ **304 Stainless Steel Ratchets**

Based on a 1,000 hour Salt-Fog test performed by Garwood Laboratories Inc. 304 and 316 stainless steel alloys showed very little differences in the amount of corrosion and 304 is better suited for applications where strength & wear resistance are needed. This is why we've chosen it for the Ratchet.

Easier opening with the zipper placed on the top of the pouch.

Hand loop to aid in removing excess slack, to secure a proper seal.

✓ **Improved Boot With New Hand Loop**

A new boot design for storage of our ratcheting system features easier opening with the zipper placed on the top of the pouch. Included in this upgraded design is a hand loop to aid in removing excess slack, to secure a proper seal. It also prevents the webbing from passing back through the ratchet mechanism.
