OUTER ARMOR® by COMMERCIAL SEWING

TECHNICAL BULLETIN

SELF-BOOT POWER BIMINI WIND PERFORMANCE

Your Outer Armor Self-Boot Power Bimini is rated to perform while deployed at speeds up to 65 mph. This is accomplished through an extremely robust frame structure and significant tension in the canvas. When retracting your bimini, the canvas loses tension and may become susceptible to wind forces that create billowing and hinder self booting function.

In the event of wind force strong enough to displace the canvas out of the box, stop your bimini approximately 1 foot from being fully closed and push the canvas down into position before fully closing the bimini.
